1.1.1 USB2.0 Interface ESD Protection Solution (1)

Advantages of the Solution: The USB2.0 interface offers a data transmission speed of 500Mbps. This solution uses single-component for protection, saving space and ensuring signal integrity. The SR05 meets IEC61000-4-2 standards, with level 4 contact discharge of 20kV and air discharge of 20kV. The SR05W meets IEC61000-4-2 standards, with level 4 contact discharge of 30kV and air discharge of 30kV, providing a 7x performance improvement. It ensures that various industrial customers are protected from all kinds of electrical interference. If there are overcurrent requirements for Vbus, PTC protection is needed.

1.1.2 USB2.0 Interface ESD Protection Solution (2)

Advantages：USB2.0 provides transmission speed of 500 Mbps，Leiditech adopts single-component protection, saving space while ensuring signal integrity. The LC0502D6’ s pins 1 and 6 are connected, meeting the IEC61000-4-2, Level 4 standards, with a contact discharge of 25kV and an air discharge of 30kV. It guarantees protection against various types of electrical interference from industrial customers. If there is an overcurrent requirement for Vbus, PTC protection is needed.

1.2 Dual USB2.0 Interface ESD Protection Solution

Advantages: USB2.0 provides a transmission speed of 500 Mbps， Leiditech adopts a single component to protect two USB ports, saving space while ensuring signal integrity, meeting IEC61000-4-2 Level 4 standards, with contact discharge at 8kV and air discharge at 15kV.
If overcurrent protection is required for Vbus, PTC protection should be included.

1.5 Electrostatic Surge Protection Solution for USB Port of Mobile Phone

Advantages: This solution adopts a level-2 protection design, and saving space. It provides primary stage protection for large surge components, and it is suitable for international markets. The secondary stage uses DFN1006-3 dual-channel components for ESD protection, meeting the IEC61000-4-2 standard with contact discharge at 30kV and air discharge at 30kV.

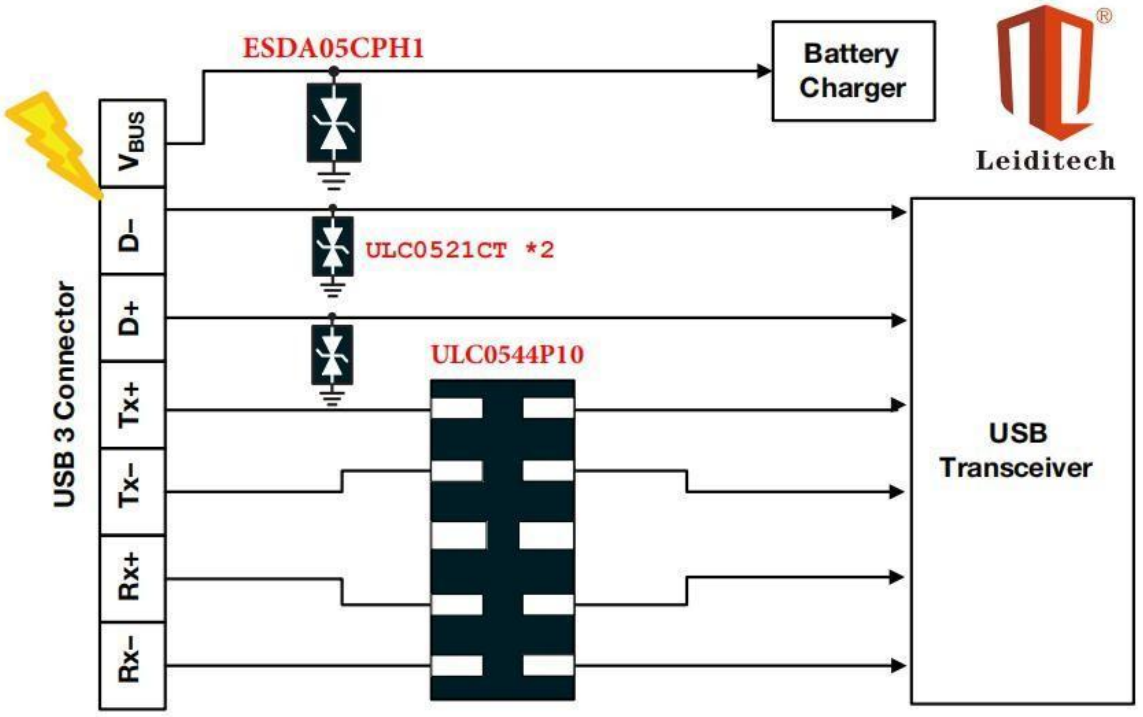
1.8 USB 3.1 Gen 2 Port ESD Protection Solution



USB 3.1 Gen 2 supports a Tx/Rx differential pair with speeds up to 10 Gbps. At these speeds, the capacitance of ESD protection must be minimized to maintain signal integrity. The ESD protection for USB 3.1 Gen 2 should have a capacitance of 0.5 pF or lower and an operating voltage greater than 3.6V. The solution includes ultra-low capacitance data lines (Tx, Rx) and low capacitance ESD devices for D+/D- and VBUS lines.

1.9 USB 2.0-USB 3.1 Port ESD Protection Solution

Background: USB ports have evolved from USB 2.0 to USB 3.1 Gen 2, with data speeds increasing from 480 Mbps to 10 Gbps. Higher data speeds require lower capacitance in ESD protection components to maintain signal integrity. The solution involves using ESD protection with low capacitance for the Tx/Rx lines, with operating voltages above 3.6V. The ESD protection is provided by three channels with ultra-low capacitance (0.25 pF) to protect the VCC, D+, D-, and GND lines, ensuring complete protection of both power and data lines.

1.10 USB-PD Fast Charging Power ESD Protection Solution

Advantages: The USB Power Delivery Specification, known as USB-PD, is a standard for fast charging via USB, supporting up to 240W power supply to systems. The VBUS pin commonly supports voltages of 12V, 15V, and 24V. This solution uses a small-sized (2mm x 2mm) DFN2020-3 series package from Leiditech, providing high-power ESD protection for fast charging applications.

1.11 USB4 High-Speed Interface ESD Protection Solution

Advantages: The USB4 interface supports data transmission speeds up to 40Gbps. This solution uses a low-capacitance (0.2pF), small-footprint DFN0603 package, incorporating a discrete component-based ESD protection scheme for easy routing. It ensures signal integrity, filters out noise, and meets IEC61000-4-2 (Level 4) standards.

2.1 10G Ethernet Interface ESD Protection Solution

Advantages: This solution is designed for indoor Ethernet interface ESD protection. It uses four ULC0542T chips to protect eight high-speed data lines. With an ultra-small DFN1610-6 package, a capacitance of 0.3pF, it meets IEC61000-4-2 (Level 4) standards, providing contact discharge protection up to 30kV and air discharge protection up to 30kV, and it can pass eye diagram tests.

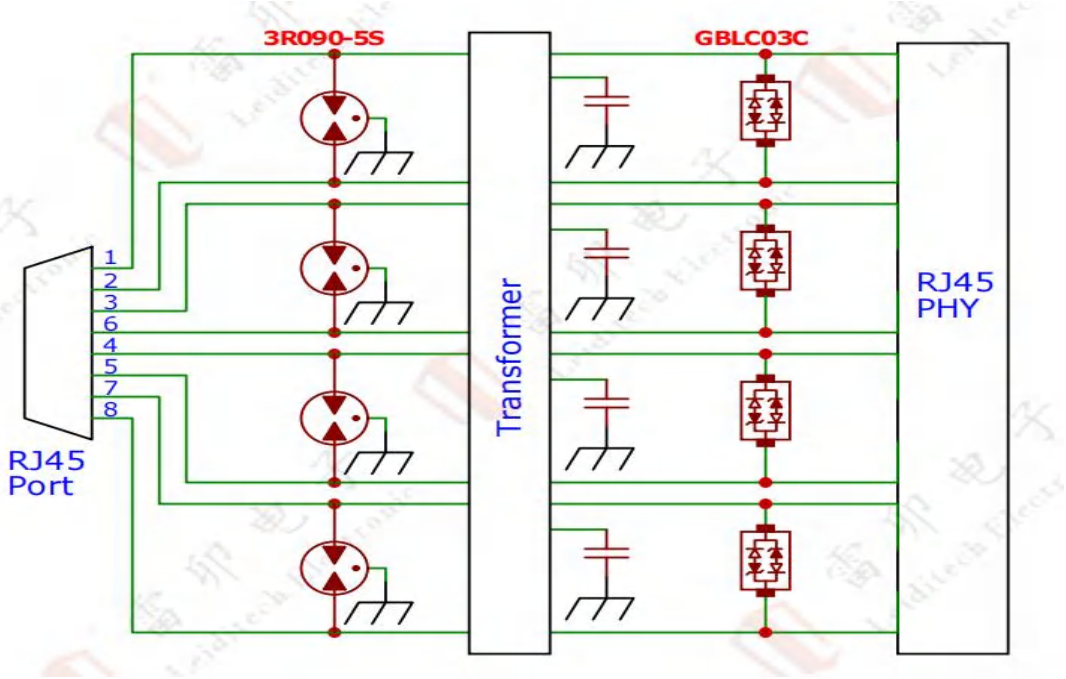
2.3 Gigabit Ethernet Discrete Lightning Protection Scheme

Advantages of the Solution: For outdoor Gigabit Ethernet port (1000M) surge protection, this solution employs a two-stage protection system for reliable operation, ensuring signal integrity at high temperatures, and meeting IEC61000-4-2 Level 4 standards with contact discharge ratings of 30kV and air discharge ratings of 30kV. It also conforms to IEC61000-4-5 with a 10/700μs waveform, 40Ω impedance, 6kV voltage rating, and ±5 pulses. This solution ensures no packet loss during high-temperature transmission.



Part Number	Description	IPP	Channels	Shape	Packaging

2.5.2 Gigabit Ethernet 3.3V Low Residual Voltage High Current Integrated Protection Scheme

Advantages of the scheme: ESD protection features: Gigabit Ethernet port ESD protection using multiple integrated components with high ESD protection, small size, low capacitance. Ensures signal integrity, meeting the following standards:
IEC61000-4-2 (ESD) ±30kV (air), ±30kV (contact)
IEC61000-4-4 (EFT) 40A (5/50ns)
IEC61000-4-5 (Lightning) 32A (8/20μs)
Network transformer features: compact, low height, inductance factor 1:1, open inductance: 350uH; insertion loss: -1.1 dB Max, DC resistance 1.3Ω.

2.10.2 POE Outdoor 4KV Lightning Protection Scheme

Advantage: This plan is designed for surge protection of POE network ports used outdoors. It adopts a secondary protection approach that ensures reliable operation, maintains signal integrity at high temperatures, and meets the IEC61000-4-2 standard, level 4, with a contact discharge rating of 30kV and air discharge rating of 30kV. The plan also complies with the IEC61000-4-5 standard (10/700μs, 40Ω, 4kV, ±5 times), using LMBJ58CP4 specifically designed for POE 48V power supply, ensuring high-temperature transmission without packet loss.

2.11 POE Power Supply Surge Protection Scheme

Plan Application Background: As POE applications become more widespread, long cables may bring induced surge risks, necessitating that designed products comply with the IEC 61000-4-5 standard.

Plan Advantage: The scheme uses SM15T68CA, which can withstand a clamping voltage of 68V, ensuring stable 48V power supply and appropriate filtering. It guarantees instantaneous voltage control on PCB boards, passing the IEC61000-4-5 surge standard's level 4 test, 8/20μs, 42Ω, 4kV, ±10 times.

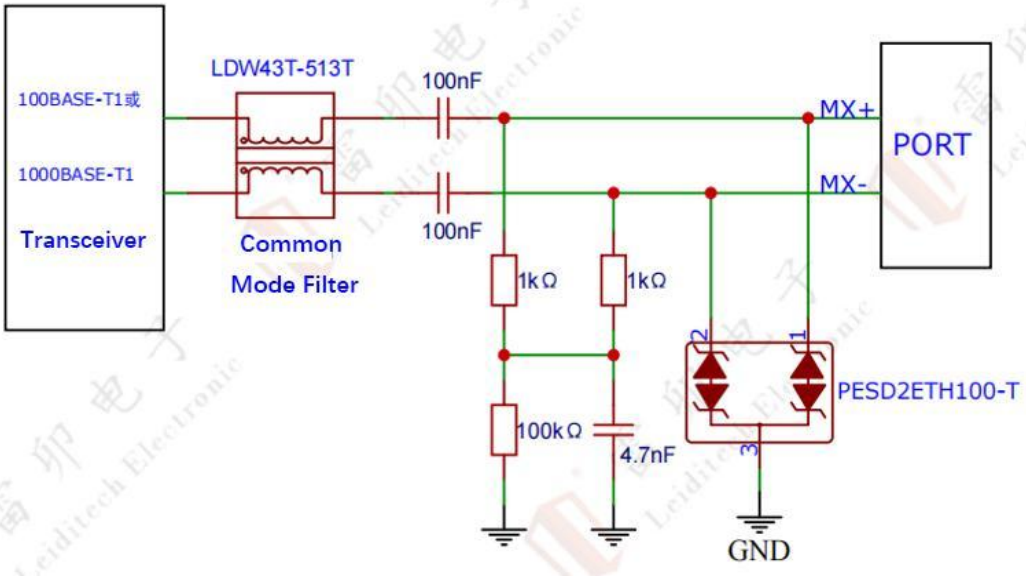
2.12 In-vehicle Ethernet Protection Scheme

Advantage: LeiDitech provides a protection scheme based on 100BASE-T1 and 1000BASE-T1 development alliance standards, designed to protect against ESD and other transients without compromising the in-vehicle Ethernet system. The ESD device used in this scheme adopts silicon technology, offering higher reliability with a dual-diode capacitance value of 3pF, ensuring signal integrity.



The left-side transceiver contains the PHY along with some basic filtering components and on-chip ESD. CMC is used to reduce common mode. The ESD device PESD2ETH100-T is located near the RJ45 connector, where high ESD currents will be directed to GND, protecting the backend PCB, PHY, and other components.

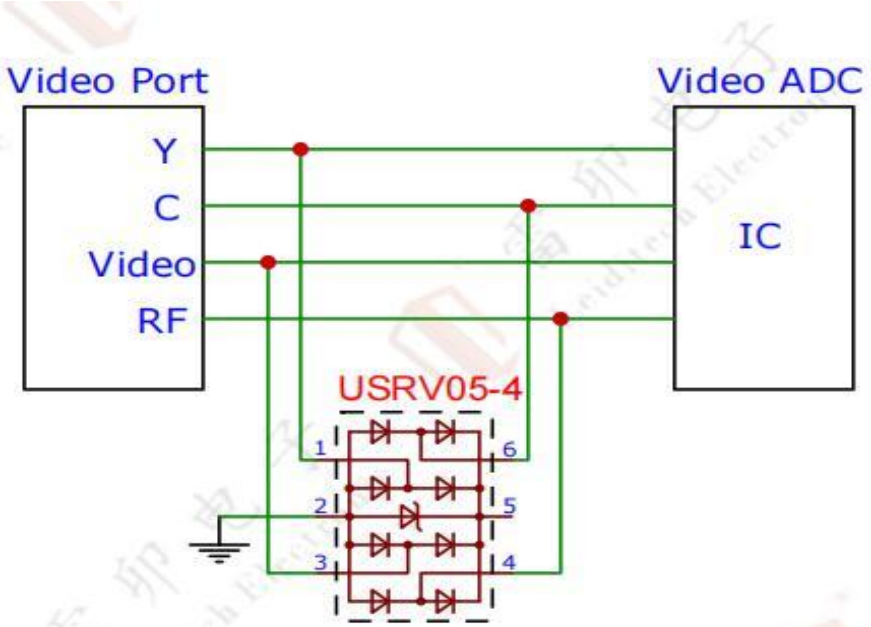
3.1 Analog Video Interface ESD Protection Solution

Advantages of the solution: For analog video with a maximum transmission speed of <5Mbit/s, ordinary low-capacitance devices can be used for ESD protection. It meets the IEC61000-4-2, Level 4 standard, with contact discharge of 20kV and air discharge of 20kV. A single-channel 0402 packaged device can be selected.



Part Number	Description	IPP	Channels	Shape	Packaging

3.2 S-VIDEO Interface Electrostatic Surge Protection Solution

Solution 1: Discrete Component GBLC05C Solution .

Advantages of the solution: This solution uses ESD diodes GBLC05C for surge protection of the S-VIDEO interface. The discrete components are SOD-323 packaged, facilitating wiring. It has low capacitance, high IPP current of 18A, ensuring complete signal integrity while providing certain surge protection. It complies with the IEC61000-4-2 (ESD) ±30kV (air) and ±30kV (contact) standards, offering strong ESD protection.

3.2 S-VIDEO Interface Electrostatic Surge Protection Solution

Solution 2: Integrated Component LCC05DT3 Solution.
Advantages of the solution: This solution uses ESD diodes LCC05DT3 for surge protection of the interface. The integrated component is SOT-23 packaged, saving space, with low capacitance and high IPP current of 12A. It ensures complete signal integrity while providing certain surge protection. It meets the IEC61000-4-2 (ESD) ±30kV (air) and ±30kV (contact) standards, offering strong ESD protection capability.

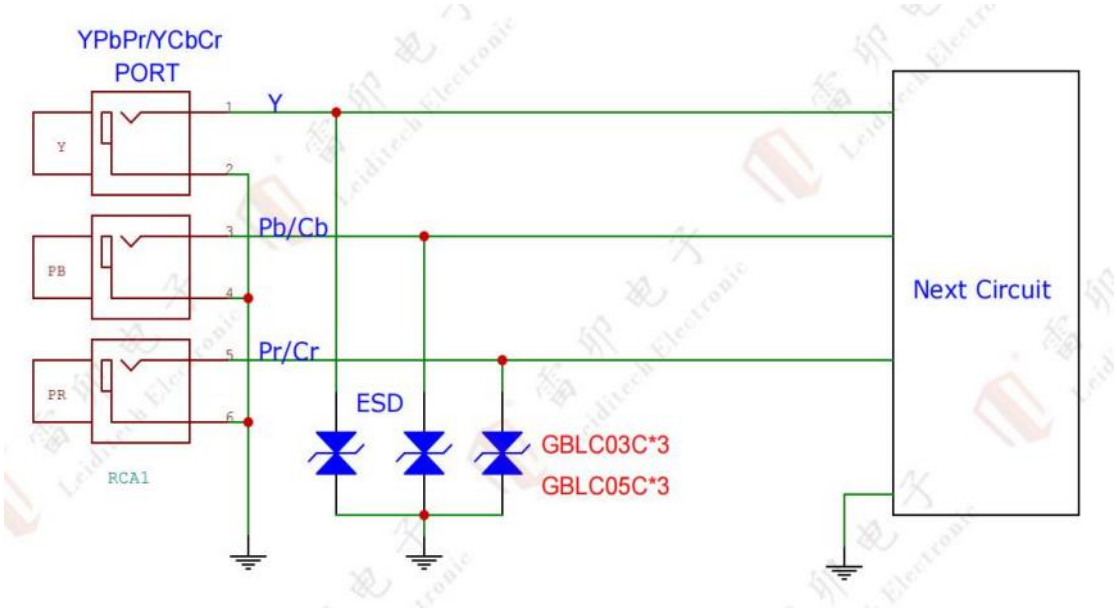
3.3 YPbPr/YCbCr Interface Electrostatic Surge Protection Solution

Solution 1: Discrete Component Solution GBLC03C/GBLC05C

Advantages of the Solution: This solution uses three discrete ESD diodes to complete the electrostatic surge protection of the interface, facilitating wiring, with low junction capacitance and a large IPP of 20A/18A. It ensures the integrity of the signal transmission while providing a certain degree of surge protection. The ESD resistance complies with IEC 61000-4-2 (Electrostatic Discharge) ±30kV (air) and ±30kV (contact) standards.



Part Number	Description	IPP	Channels	Shape	Packaging
GBLC03C	3.3V,Bi 0.6PF ±30kV(air), ±30kV(contact)	20A	1		SOD-323

3.3 YPbPr/YCbCr Interface Electrostatic Surge Protection Solution

Solution 2: Integrated Component Solution ESDA3.3CW-4/ESDA5.0CW-4. Advantages of the Solution: The solution employs a single integrated ESD (Electrostatic Discharge) diode to complete the electrostatic surge protection of the interface, saving space, with low junction capacitance, and a large IPP (Peak Pulse Current) of 10A/7A. It ensures the integrity of the signal transmission while providing a certain degree of surge protection. The ESD resistance complies with IEC 61000-4-2 (Electrostatic Discharge) ±30kV (air) and ±30kV (contact) standards.

5.1 LVDS Interface ESD Protection Solution

Advantages: The LVDS interface offers a transmission speed of 655Mbit/s. This solution uses integrated components for ESD protection with a parasitic capacitance of less than 1pF, ensuring signal integrity. It meets the requirements of IEC61000-4-2, Level 4, with contact discharge of 8kV and air discharge of 15kV.

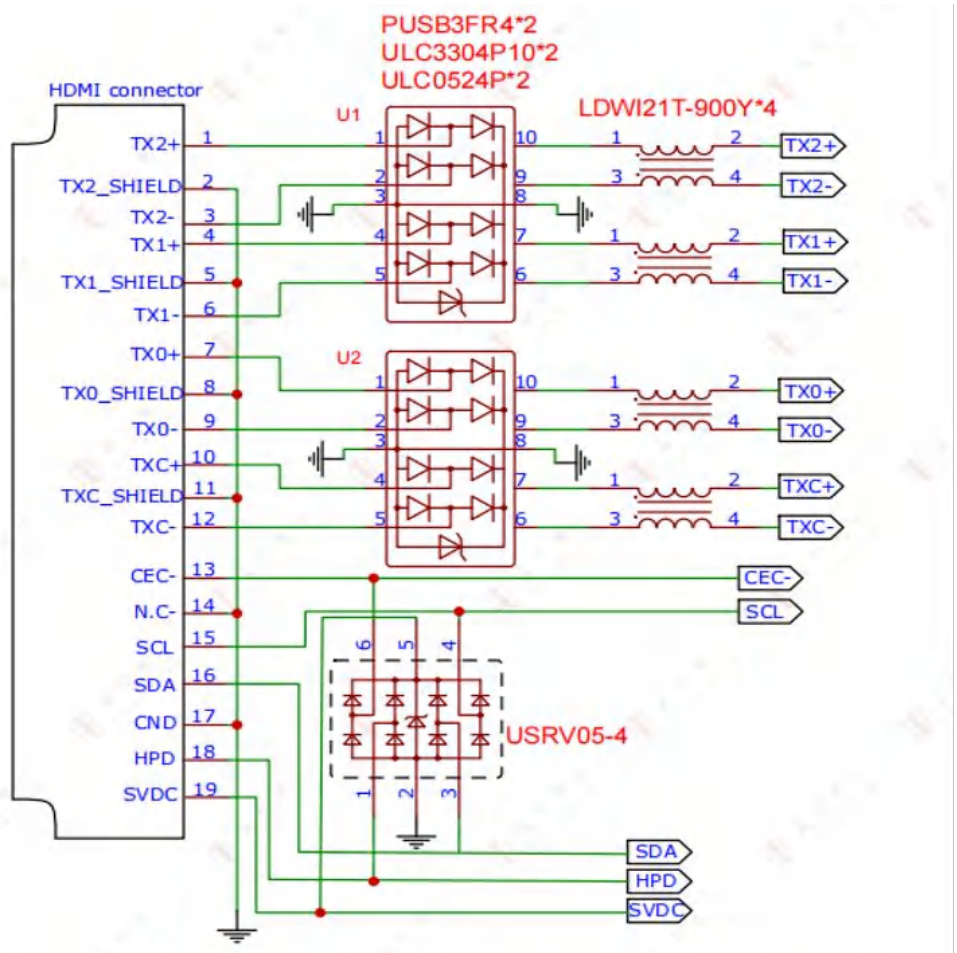
6.2 HDMI2.0 Interface Electrostatic Filtering Protection Solution

Advantages: For HDMI2.0, this solution uses multi-channel integrated device protection, saving space, ensuring signal integrity, filtering out noise, meeting IEC61000-4-2 (Class 4), with contact discharge at 25kV and air discharge at 30kV.



For U1 and U2, pins 1 to 10, 2 to 9, 4 to 7, and 5 to 6 are not internally connected within the chip and require external wiring for connection.

7.1 DVI Video Interface Electrostatic Protection Solution

Advantages of the solution: This solution uses integrated circuits for protection with a capacitance of less than 2pF, ensuring signal integrity while passing the electrostatic test. It complies with the IEC61000-4-2, level 4 standard, with contact discharge protection of 8kV and air discharge protection of 15kV. The discrete LC05CI component also meets these requirements.

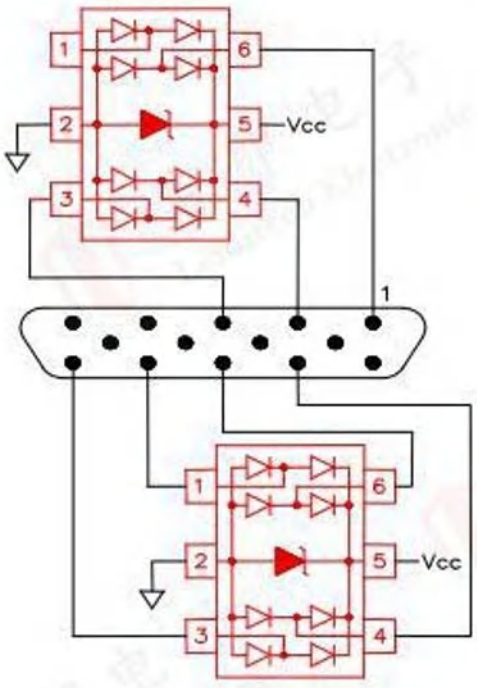
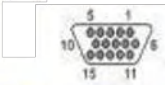
8.1 VGA Video Interface Electrostatic Protection Solution

Solution Advantage: Adopts integrated device protection with capacitance less than 1pf, which can ensure signal integrity while passing the ESD test. It complies with IEC61000-4-2 Level 4 standards, with a contact discharge of 8kV and air discharge of 15kV. The smaller LC0504F package meets the same requirements.



The interface on the graphics card is a 15-pin female connector.



The interface at the display connection end is a 15-pin male connector.

16.4 CAN Interface Electrostatic Surge Protection Solution

Solution Advantages: This solution is used for surge and electrostatic protection of CAN interfaces. It uses low residual voltage TSS (Transient Suppression System), effectively protecting CAN interfaces with ns-level response time. It can prevent surges, electrostatic discharge, and ensures signal integrity. It meets IEC61000-4-2, Level 4, withstanding a contact discharge of 15kV, an air discharge of 8kV; IEC61000-4-5 surge test 10/700μs, 8kV.

20.1 RS232 Interface Integrated Electrostatic Protection Solution

The RS-232 standard interface, also known as EIA RS-232, is a commonly used serial communication interface standard, typically applied to point-to-point communication over shorter distances. This interface is often used as a test interface on communication devices, and as a communication interface between boards and monitoring signal interfaces, with a maximum baud rate of 115,200 bps. Solution Advantages: This solution employs integrated components for protection, ensuring signal integrity while passing electrostatic discharge (ESD) tests. It complies with IEC61000-4-2, ISO10605-2, Level 4 standards, and supports contact discharge of 30kV and air discharge of 30kV.

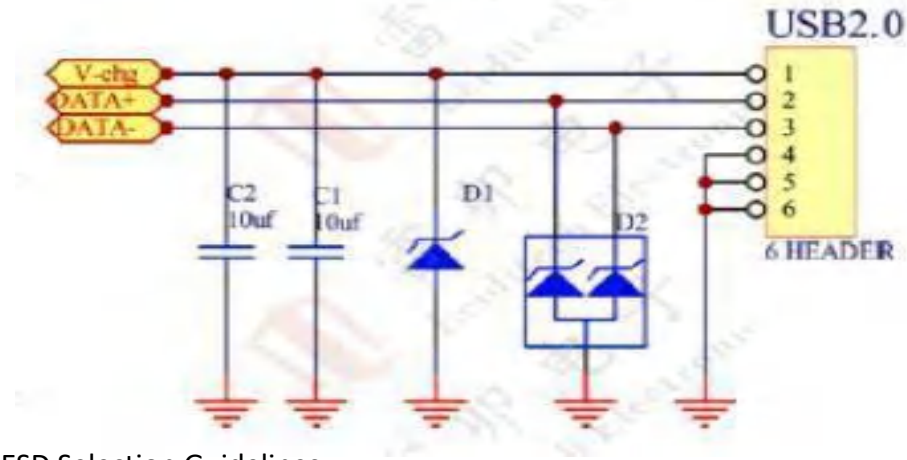
23.1 Mobile VBAT Electrostatic Discharge (ESD) and Surge Protection Solution

Solution Advantages: This solution employs a two-level protection mechanism that saves space and provides advanced surge protection for front-end components, suitable for the Indian and Southeast Asian markets. The back-end employs DFN1006-3 dual-line ESD protection components, meeting IEC61000-4-2 standards, with contact discharge of 8kV and air discharge of 15kV.



Notes:ESD Selection Guidelines:

1. Choose the appropriate package.
2. Ensure the clamping voltage of the TVS is higher than the maximum operating voltage of the circuit.
3. Select the power that meets the test requirements.
4. Choose a smaller capacitance value.

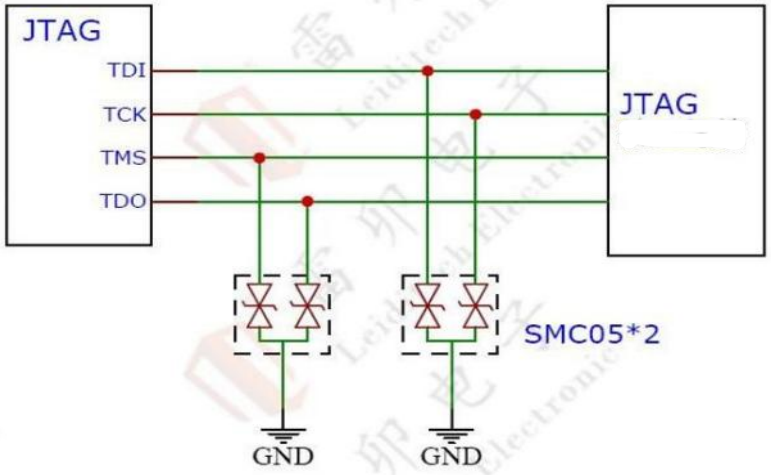
26.1 JTAG Interface ESD Protection Scheme (5V)

Solution Advantages: The programming download interface commonly used by FPGA/ARM is the JTAG interface. The JTAG interface is frequently used as a type of programming interface, and it is also an interface that often involves electrical plugging and unplugging. This inevitably generates some static electricity or surge currents. Therefore, if some protective measures are not taken, it is very easy for the JTAG-related pins to be struck by ESD discharge, potentially damaging the internal core circuit of the CPU, resulting in permanent damage to the internal circuitry of the CPU. The solution uses integrated device protection, which can ensure signal integrity while passing the ESD test. It meets IEC61000-4-2, contact discharge 30kV, air discharge 30kV.



Part Number	Description	IPP	Channels	Shape	Packaging
SMC05	Bi, 80PF ±30kV(air), ±30kV(contact)	18A	2		SOT-23

26.2 JTAG Interface ESD Protection Solution 3.3V

Generally, the programming download interface used by general FPGA/ARM is JTAG interface. JTAG interface is a type of programming interface that is often used, and it is also a type of interface that often involves plug-in and plug-out operations. Such operations can inevitably generate some static electricity or surge currents. Therefore, if some protective measures are not taken, it is very easy for the JTAG-related pins to be damaged by ESD discharge, which can even damage the core circuit inside the CPU, causing permanent damage to the internal circuits. Solution Advantages: Using integrated device protection can ensure the integrity of the signal while passing the ESD test. Standard Compliance: Meets IEC61000-4-2, withstanding contact discharge of 30kV and air discharge of 30kV.

27.1 FlexRay Automotive Network ESD Protection Solution

FlexRay automotive network standards have become the basis for similar products, representing the latest development following CAN and LIN. FlexRay offers faster data speeds, more flexible data communication, and comprehensive options and error handling. FlexRay can support various topologies, achieving 20 times the bandwidth of CAN networks (20Mbit/S).Solution Advantages: Leiditech provides multiple protection solutions to address potential ESD damage or other transient over-voltage issues, including low-energy 8/20μs surge currents.Compliance:The solution meets the IEC61000-4-5 standard for 8/20μs surge current.

28.1 Fingerprint Recognition Electrostatic Protection Solution

Solution Advantages:Humans are the largest carriers of static electricity, typically carrying tens of thousands of volts. During the dry autumn and winter seasons, static electricity is more likely to accumulate on the human body. Given that fingerprint recognition inevitably involves contact with humans, electrostatic protection becomes crucial. This solution uses single component protection, saving space, ensuring signal integrity, and meeting IEC61000-4-2 standards, Class 4, with contact discharge at 20kV and air discharge at 20kV.

29.1 Coaxial Surge Protection Solution

Solution Advantages: This solution is designed to protect the GPS interface, safeguarding both the power supply and the emitted signal from surges. The solution employs a two-stage protection mechanism, ensuring reliable operation and maintaining signal integrity at high temperatures. It complies with IEC61000-4-2, level 4 standards, with contact discharge protection up to 30kV and air discharge protection up to 30kV. Additionally, it meets the IEC61000-4-5 standard with an 8/20μs surge capability of 5kA.

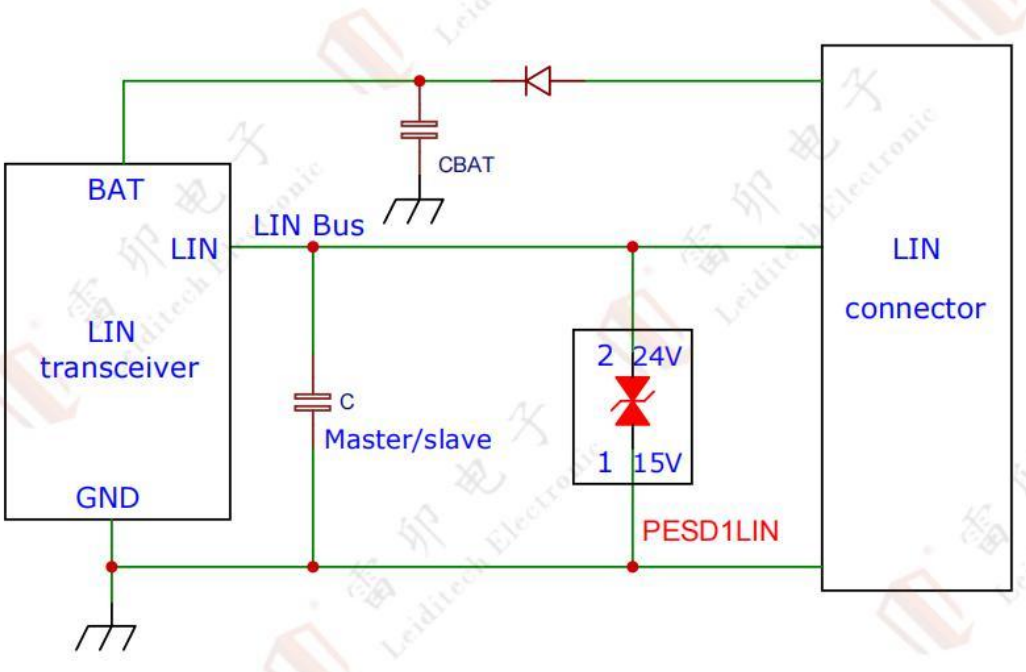
32.1 LIN Bus Interface ESD Protection Solution

LIN (Local Interconnect Network) is a low-cost serial communication network used to implement distributed electronic system control in vehicles. It serves as a complement to controller area network (CAN) for vehicle multiplexing, suitable for applications where bandwidth, performance, or fault tolerance are not critical. LIN uses SCI (UART) data format, typically with a single master controller/multiple slaves mode.Solution Advantages:This solution uses integrated components for protection, with a capacitance of <20pF, ensuring signal integrity and passing ESD testing. It meets IEC61000-4-2, Class 4, with contact discharge at 30kV and air discharge at 25kV.



Part Number	Description	IPP	Channels	Shape	Packaging

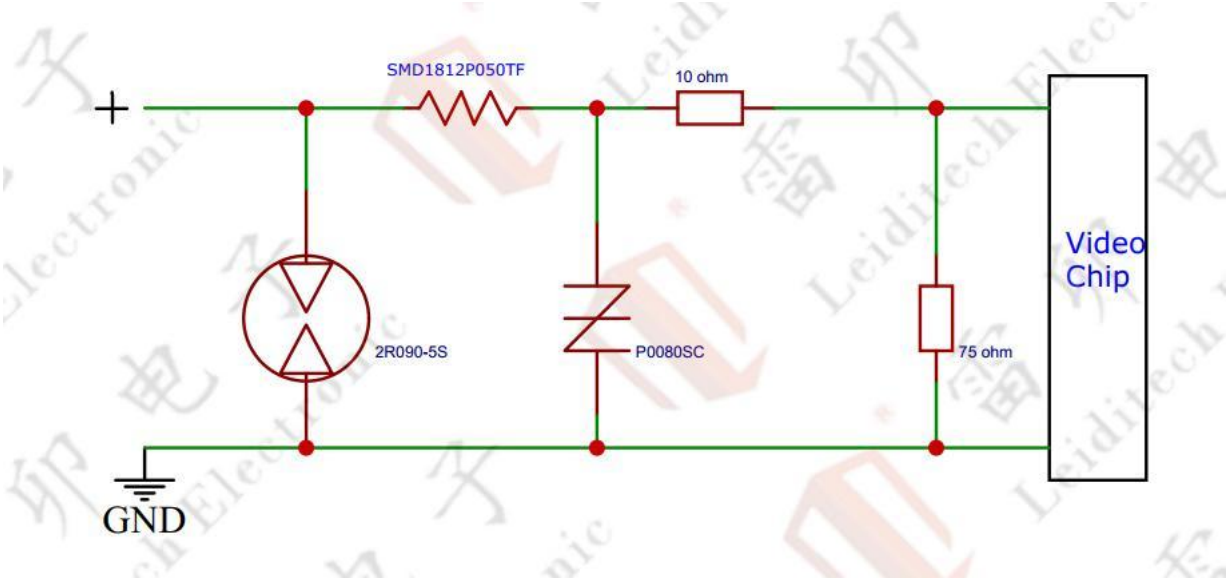
34.1 VIDEO Interface ESD Surge Protection Solution

Solution Advantages: This solution employs a two-level protection, ensuring reliable operation and signal integrity with a transmission frequency of 10MHz.
Note: For currents > 1A, use an inductor for retreat; for currents < 1A, PPPTC is more effective.
Complies with: IEC61000-4-2, Class 4, contact discharge 8KV, air discharge 15KV; IEC61000-4-5 10/700μs 6KV



Part Number	Description	IPP	Channels	Shape	Packaging

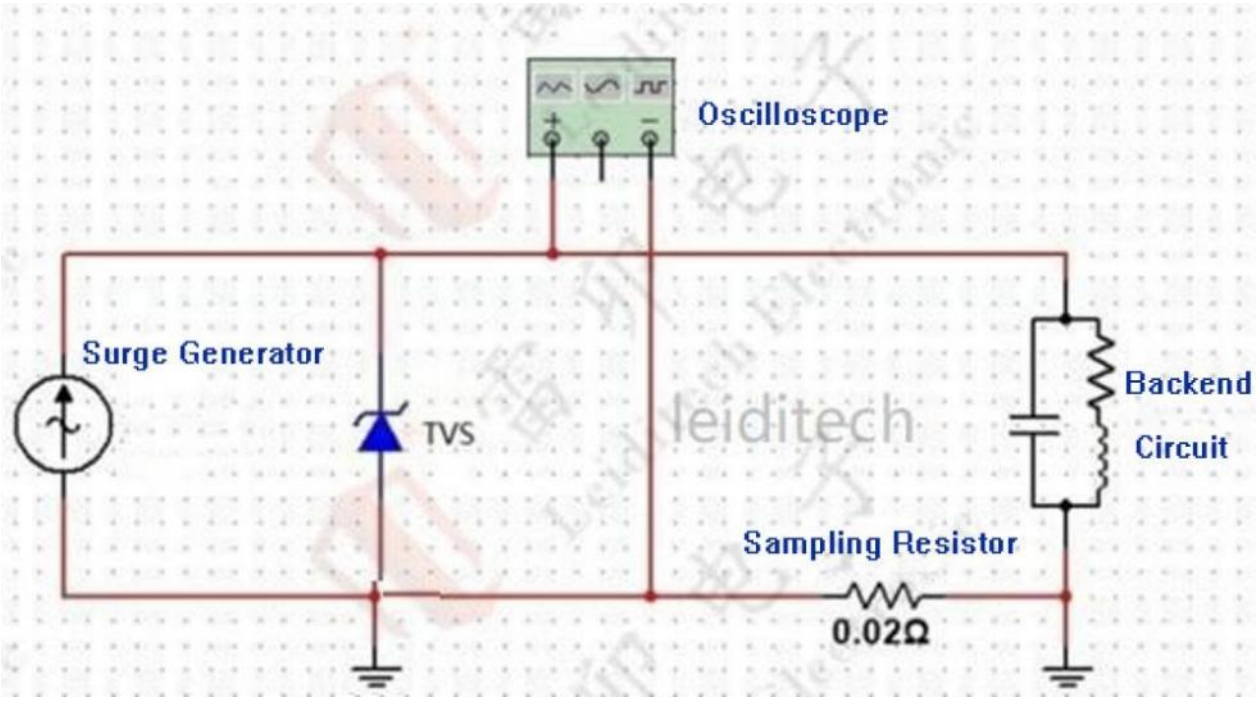
3.1 3.7V Lithium Battery Electrostatic Surge Protection Solution

(Adding a sampling resistor after the TVS circuit aims to limit current flow, making it easier for the TVS to release surges, thus protecting the back-end circuit.)



When designing a PCB to suppress electrostatic discharge (ESD), electrical fast transients (EFT), and surge, follow these guidelines:

1. Place TVS diodes as close as possible to the input connector.
2. Minimize the length of the routing between TVS, ESD diodes, and protected lines.
3. Reduce the number of horizontal signal layers.
4. Avoid running unprotected traces parallel to protected ones.
5. Minimize conductive loop areas on the PCB, including power and ground traces.
6. Reduce the length of ground return paths.
7. Avoid sharing ground points with transient return paths.
8. Use ground planes when possible. For multilayer PCBs, use ground vias.

8.1 18V DC Power Supply Surge Protection Solution

Solution Advantages: Used for surge protection at 18V DC power interfaces. Depending on the power source environment, choose suitable TVS components to protect the current, meeting IEC61000-4-2, Class 4, with contact discharge at 8KV and air discharge at 15KV. For higher-level surge tests complying with IEC61000-4-5, use high-power SMC components.

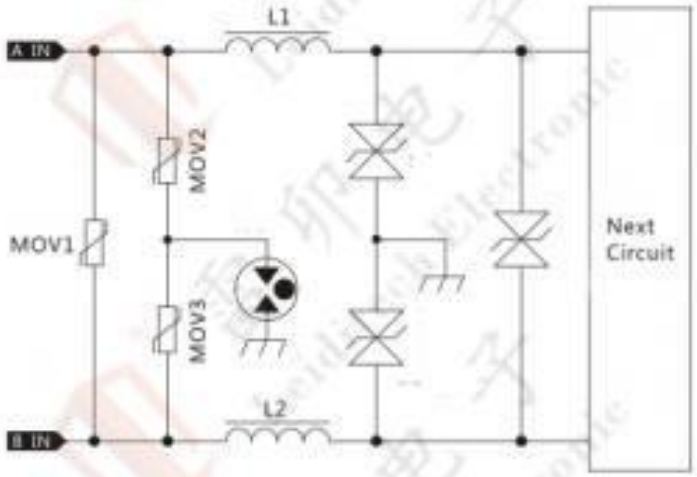
9.3 24V DC Surge Protection 2KV, Compact and Low Residual Voltage Solution

Recently, many customers have reported that DC power supply products fail to protect against lightning strikes, leading to frequent malfunctions and significant losses. Traditionally, improving lightning protection reliability is seen as requiring significant investment. However, Leiditech Electronics has now introduced a new solution for protecting DC24V DC 2KV with a small form factor for testing. Here, we also compare this with traditional lightning protection solutions.

1. Traditional Solution DC Power Surge Protection



The traditional surge protection solution comprises GDT (3R090-5S) + MOV (10D470KJ) + Inductor + TVS (SMCJ24CA). This combination can protect against surges up to 4KV, with residual voltage levels tested at about 40V. The back-end LDO requires a significant margin of withstanding voltage.The necessity of many components is due to the layered approach in surge protection, where surges are decomposed layer by layer, ultimately reduced to TVS, ensuring IC protection. GDTs handle large surges but have a slow response and high residual voltage, necessitating MOVs and TVS for continued voltage reduction and rapid response. Inductors and PTCs are ideal for decoupling before the TVS, explaining the complexity of the circuit.

ELECTRICAL CHARACTERISTICS(T_A=25℃)

Part Number	V_R	I_R@V_R	V_{BR}@I_T		I_T	V_C@V_{PP}①	V_{PP}①
Bi-Polar	V	μA	min(V)	max(V)	mA	max(V)	V
LM1K24CA	24	1	25	29.5	1	35	1600

① Surge waveform: 1.2/50μs &8/20μs

V_R: Stand-off voltage -- Maximum voltage that can be applied

V_{BR}: Breakdown voltage

V_C: Clamping voltage -- Peak voltage measured across the suppressor at a specified V_{PP}

I_R: Reverse leakage current

LM1K24CA Features:

1. Package small SMB
2. 2. Low residual voltage, VC=35V, can reduce the withstand voltage cost of LDO or DC-DC
3. 3. Single can protect the level up to 2KV.

10.1 36V DC Power Supply Surge Protection Solution

Solution Advantages: This solution is designed to address the surge protection requirements for a 36V DC power interface. Depending on the environmental conditions of the power supply, appropriately rated ESD (Electrostatic Discharge) / TVS (Transient Voltage Suppression) devices are selected to ensure compliance with IEC61000-4-2, level 4 standards, which entail withstanding contact discharge of 8kV and air discharge of 15kV. In order to meet the higher-level surge testing stipulated by IEC61000-4-5, high-power SMC devices must be employed.

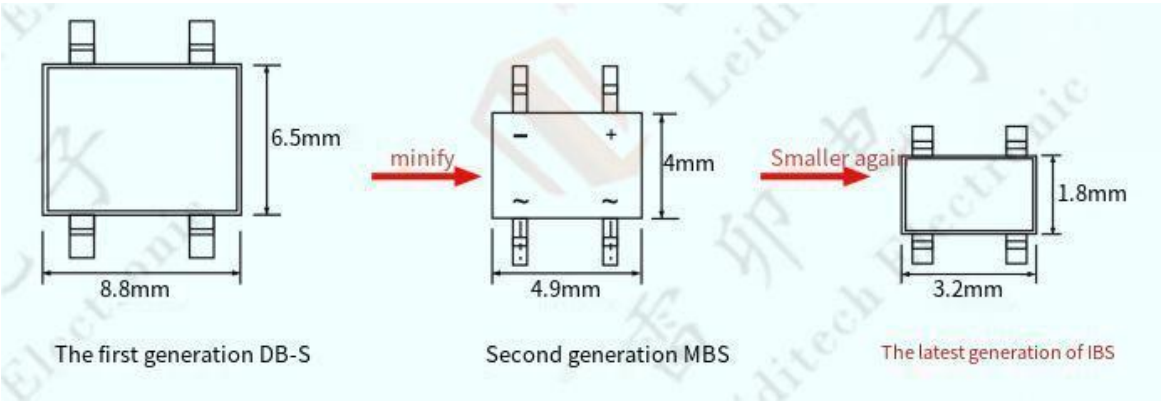
14.1 Rectification Solution for LED Power Supply

The IBS package rectifier bridge is the industry's smallest SMD rectifier bridge. The IB-S series is professionally used in the field of LED lighting.



The rectifier bridge is composed of four diodes, which play a rectifying role in the circuit. It can not only convert AC to DC but also ensure polarity-free DC output. It can be applied to switching power supplies, lamp beads, etc., in LED intelligent lighting.

15.1 Mobile Phone Fast Charging PD/TYPE-C Interface Protection

(USB PD fast charge 15W 27W 45W)

1. VBUS charges and supplies power for mobile phones.

2.CC1/CC2 is the Configuration Channel.

Main functions of CC1/CC2 pins:

A. detect the connection of data lines, distinguish the front and back insertion of data lines, and distinguish the master and slave devices.

B. Configure VBUS (there are two modes: USB TYPE_C and USB Power Delivery)

C. when configuring other modes, such as audio accessories

The TX1/RX1 TX2/RX2 D+D- pins will be used in some schemes.

TX1/RX1 TX2/RX2 are USB3.1 data transmission, and only one of them is used by Type-c mobile phones at present.

D+D- is a USB2.0 data transmission signal

See the following table for more high current electrostatic surge protection and small package ESD:

15.2 USB-PD Fast Charging Power Interface Electrostatic Surge Protection Solution

Solution Advantages: The acceptable input range of this solution is 90 VAC ~ 265 VAC, with an output range of 5 V ~ 20 V and a maximum output power of 65 W. Below is the topology diagram, with a TVS added at the output end, which can provide certain protection against static electricity and surges, protecting downstream electronic equipment. This topology is for reference regarding the placement of the TVS and is not to be used as an actual circuit diagram (the actual circuit is more complex).

17.1 Anti-reverse Protection Solution for Low VF Schottky Power Supply

This solution uses 3 low-dropout SKY, which has lower power consumption than only 1 and can prevent the components from overheating (Comparison formula of normal operating loss between the two:

1.Use 1 SS34LVFA: P=VF*IF=0.42V*3A=1.26W

2. Use 3 SS34LVFA:P=VF*IF=0.31V*1A*3=0.93W) For surge protection of DC power interface, TVS and SKY devices can be selected according to the environment where the power supply is located , effectively used for anti-reverse polarity.

Meet ISO61000-4-2 (level 4) contact discharge 30kV, air discharge 30kV.

To meet the IEC61000-4-5 surge high-level test, high-power SMC package devices are selected.

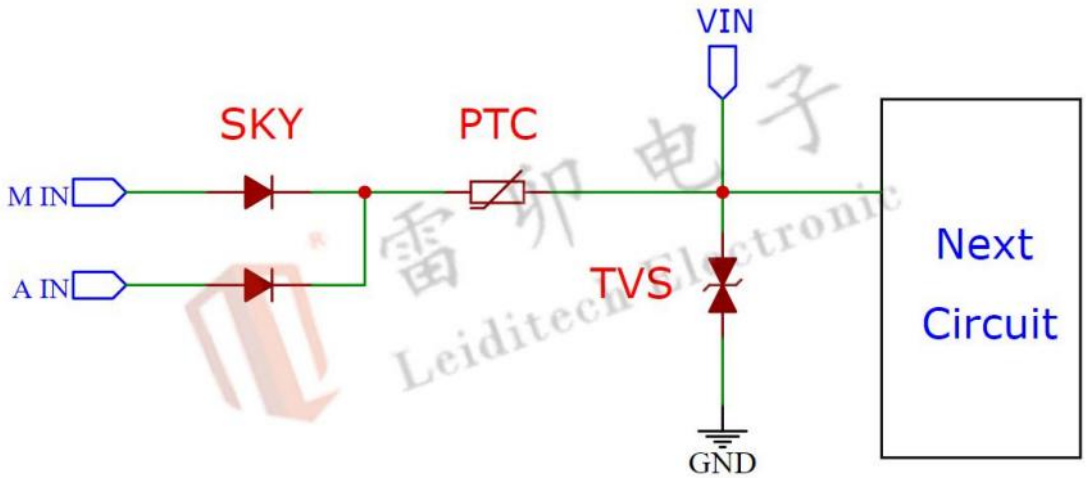
17.2 Anti-reverse Protection Solution of Low IR Schottky Power Supply

This solution adopts two low leakage current SKY, one for each power line, low leakage current is more energy-saving, and can be applied in switching power supplies with large leakage current.

For surge protection to meet the DC power interface, TVS and SKY devices with suitable protection current can be selected according to the environment in which the power supply is located, and are effectively used for anti-reverse connection. Meet ISO61000-4-2 (level 4) contact discharge 30kV, air discharge 30kV. To meet the IEC61000-4-5 surge high-level test, high-power SMC package devices are selected.



This solution is especially suitable for the battery at one end,
and the anti-reverse connection of charging at one end is particularly energy-saving

19.1 Silicon Carbide SIC New Energy Vehicle Charging Pile Solution

Application Background: Electric vehicle charging requires high power, high DC voltage, large capacity, rapid charging of high-voltage batteries, high reliability, high efficiency, and minimal heat generation. Therefore, a component with low loss, fast speed, and high power is needed. Leiditech Silicon Carbide (SiC) diodes and SiC MOSFETs can be applied in critical circuits of EV chargers such as PFC and full-bridge LLC, improving power factor and enhancing system efficiency and reliability. Solution Advantages: Leiditech SiC diodes feature fast reverse recovery time, high voltage rating, and extremely low switching losses. Leiditech SiC MOSFETs switch rapidly, achieve high voltage ratings with high currents, high efficiency, high power density, small and light modules, and lower costs.

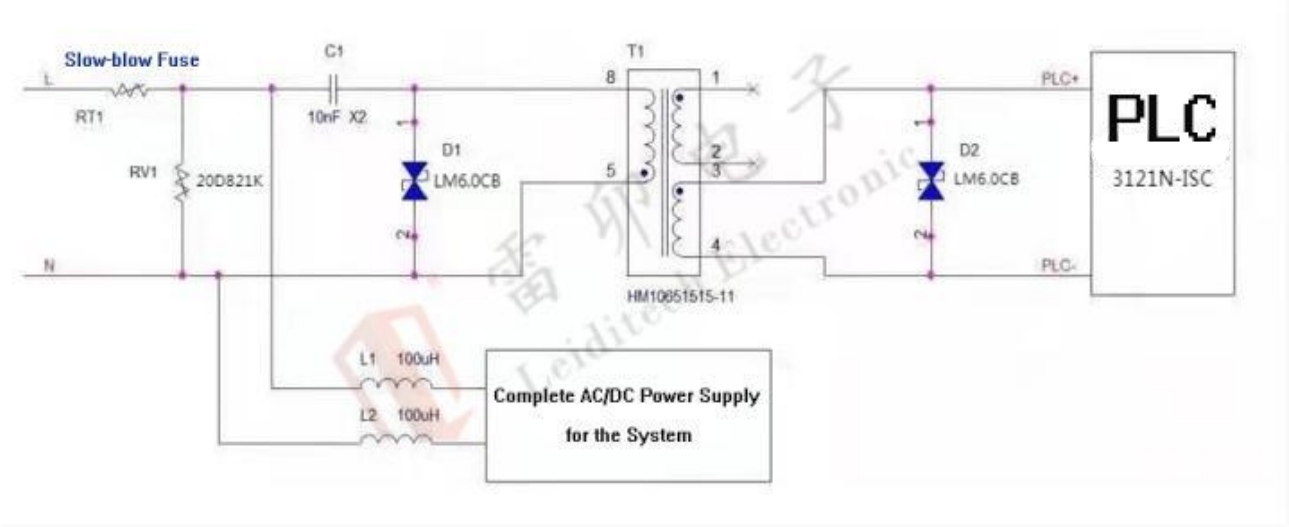
1.1 Application Solution of Power PLC Module

For the main product design, Leiditech strongly recommend referring to the circuit diagram below for the safety protection design on the L and N lines and the PLC signal coupling design. This will help to reduce the risk of PLC module damage caused by surges and other issues.



Explanation:

The bidirectional TVS protection diodes (D1/D2) for both primary and secondary stages are mandatory components.

The PLC signal connection point on the L and N lines should be placed after the varistor (RV1).

After the PLC signal, two common-mode inductors (L1/L2) need to be connected in series to isolate the PLC signal from the main power supply.

The T1 transformer is a 1:1 transformer.

C1 is a safety capacitor.

3.1 Bluetooth Speaker Control Board Electrostatic Surge Protection Solution

Bluetooth speakers often suffer from electrostatic discharge (ESD) issues due to frequent plug-in and removal, which can affect their usability in various ways such as failure to read USB cards, noisy audio playback, power cycling upon plugging in, battery malfunction, and static noise. To address these problems, it is necessary to design circuits that comply with national ESD and Surge Test standards for safety and reliability.

Leiditech recommends various interface protection devices to ensure safe and reliable operation, suitable for USB ports, TF card slots, audio/video interfaces, and DC power/battery ports. Detailed circuit diagrams can be found by visiting the protection solutions section for signal interfaces on our WeChat mini-program.

These solutions meet IEC 61000-4-2 standards at Level 4, capable of handling contact discharge up to 30 kV and air discharge up to 30 kV. For higher-level IEC 61000-4-5 Surge Test compliance, high-power SMC (Silicon Controlled Rectifier)

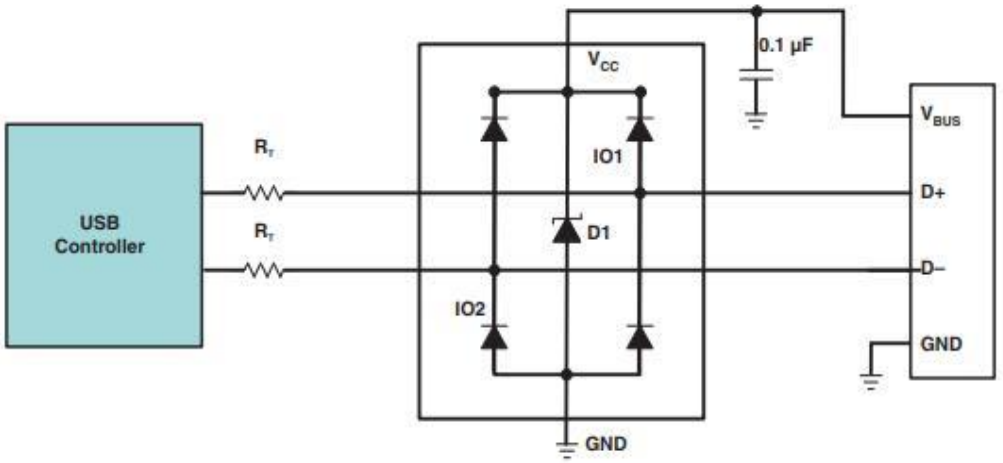
3.2 TWS Wireless Bluetooth Earphone Electrostatic Surge Protection Solution

Due to the small working IPP and compact size of headphones, it is recommended to use the self-resetting fuse part number SMD0603P010 manufactured by Leiditech Electronics. This component can effectively protect against excessive IPP and overheating issues in the charging case.

For electrostatic discharge (ESD) protection, the device LC0542T5 is recommended, which can adequately meet the ESD protection needs for VBUS and IO interfaces.

These recommendations comply with IEC 61000-4-2 standards at Level 4, providing protection against contact discharge up to 14 kV and air discharge up to 17 kV.



Part Number	Description	IPP	Channels	Shape	Packaging
LC0542T5	5V,Uni, 0.7PF ±17kV(air), ±14kV(contact)	4A	3		SOT-553
SMD0603P010TF	16V, 6Ω	0.1A	1		SMD0603

4.1 Circuit Solution for Radar Module LMXBR202010

The LMXBR202010 radar module application case demonstrates its versatility in smart lighting, smart security, home automation, and intelligent household appliances.

Radar Chip: XBR816

Center Frequency: 9.85 GHz

Supply Voltage: 1.2V

Maximum Operating Current (IPP): 50 mA

Buck Converter (DCDC): LM6216A12M3G (Output Voltage: 1.2V), LM6216A30M3G (Output Voltage: 3.3V)

ESD Protection Device: ESDA05CT30 (Working Voltage: 5V)

The components used in this module have a small packaging footprint, saving space in designs. It complies with IEC 61000-4-2 at Level 4, offering protection against ±30 kV contact and air discharge, making it robust against electrostatic discharge events.

5.1 LC03-6 Application Solution for T1, T3/E3, 10M/100M, High-Speed Drive Circuits, and ISDN-S/U Interface Circuits

The LC03-6 series is applied to suppress electrostatic surges between two high-speed data lines, capable of withstanding an IPP (peak pulse current) as high as 100A. It can be used for differential mode protection or common mode protection, and it meets the GR-1089 standard.

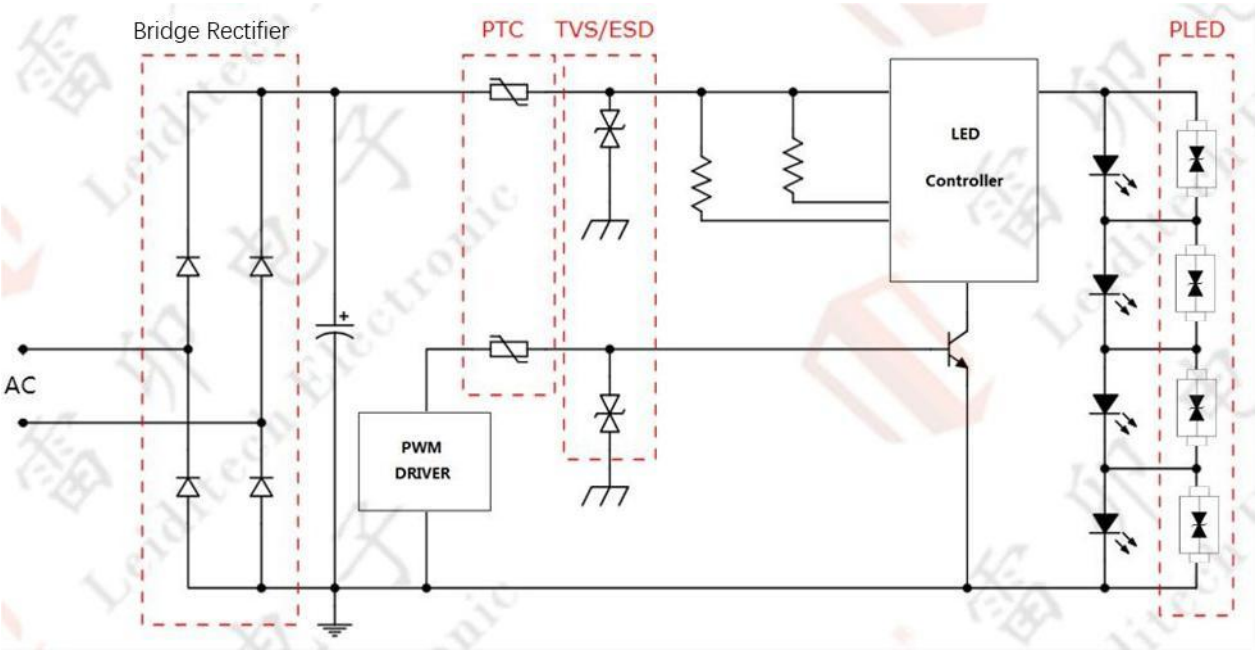
6.1 Power Module and Open-circuit Protection Solution for Smart LED Lighting



Components utilized from Leiditech include:

1,.Rectifier Bridge: Leiditech rectifier bridges are known for their smallest packaging dimensions in the industry. The IBS packaging rectifier bridge, IB-S series, is specifically recommended for the LED lighting sector.

2.Polymeric Positive Temperature Coefficient (PTC) Resettable Fuses: These are used to provide overcurrent protection and reset automatically once the fault condition has been cleared.

3.Transient Voltage Suppression (TVS) Diodes: They effectively safeguard sensitive components in electronic circuits from damage caused by various types of surge pulses, ensuring the integrity of the circuit under transient overvoltage conditions.

4.Electrostatic Discharge (ESD) Protection Devices: In the lighting industry, especially in applications involving 5V, 12V, 24V, and 36V lamps, compact ESD protection elements are recommended to save space in the circuit design.

5.LED Open Circuit Protection Devices (PLED): These are specifically designed for circuits where LED bulbs are connected in series. When one LED bulb fails or opens, it does not affect the operation of the other LEDs, maintaining circuit functionality. Additionally, they offer overvoltage protection, allowing LEDs to withstand momentary lightning strikes. With features such as low conduction voltage, rapid response, and the ability to self-recover after fault clearance, these devices significantly enhance the stability and reliability of LED circuits.

7.1 Electrostatic Protection Solution for Screen Flickering and Malfunctioning

All display screens have a baseband, which contains an IC that maintains the normal operation of the screen. Static electricity can intrude from the casing or any point on the PCBA board, affecting the normal operation of the baseband IC. The rated operating voltage of these ICs is typically around 3V, and they operate at relatively fast frequencies.

Here are some issues faced by customers:

1.Household Appliance Display Client: Upon subjecting the display to 20kV air discharge static, the screen would frequently freeze, only to recover upon restart. Analysis of the circuit board by Leiditech revealed that although the client had already incorporated numerous ESD components, the voltage ratings were incorrect, and the capacitance values were too high. Leiditech recommended using ESDA3.3CW-4 to resolve the ESD issue.

2.Workshop Tablet Control Device: The client previously chose SD03C components with excessively high capacitance. Despite the client's painstaking efforts to load additional capacitors, the results remained unsatisfactory. Leiditech suggested directly replacing them with GBLC03C without altering the PCB layout. Alternatively, if the PCB modification is an option, ESDA3.3CW-4 could be the preferred choice, replacing four GBLC03C components and eliminating the need for four SD03C components and four capacitors altogether.

3.Automotive Dashcam: Static and lightning pulses from striking the casing would lead to the screen freezing. Given the automotive context, the test grades are higher. ESDA3.3CW-4, GBLC03C, or SD03C could be added for protection. However, overall EMC (Electromagnetic Compatibility) improvements are also required, which is a topic for discussion with the EMC correction engineers.

8.1 GaN Electrostatic Surge Protection Solution

Background: Gallium Nitride (GaN) does not inherently possess the capability to absorb transient surges. During circuit switching transients and lightning-induced surges, the overcurrent and overvoltage must not exceed the rated capacity of the GaN device.

Advantages of the Solution: A TVS (Transient Voltage Suppression) diode placed at the primary side of a fly back power transformer can effectively absorb the energy of overvoltage spikes generated by FET switching transients. It reacts quickly, exhibits low clamping voltage, and is controllable.

In this solution, the PTVS160AF single component is utilized for protection. This device boasts high power handling capabilities, a small form factor, and saves space in the circuit design.

9.1 Smart Watch Activity Tracker Solution

Smartwatches and activity trackers, also known as fitness trackers, are wearable devices designed to monitor and track fitness-related metrics. These devices can be used to supervise children's location, measure walking or running distances, track calories burned, and, in some cases, monitor heart rate, thereby enabling judgments on the frequency and intensity of physical activities as well as the wearer's overall health status.

10.1 Earphone Interface Electrostatic Protection Solution

Solution Advantages: Placing ESD diodes on the left and right audio channels as well as the MIC signal lines provides protection for downstream chips. Depending on the situation, additional ferrite beads can be added to filter out noise. You can choose ESD diodes rated at 3.3V or 5V, ensuring signal integrity while passing ESD tests. This solution meets the following standards:
IEC 61000-4-2, with contact discharge up to 30kV and air discharge up to 30kV,
ISO 10605-2 Level 4.

10.2 Electrostatic Protection Solution of TWS Wireless Bluetooth Headset

Advantages of the Solution: This solution encompasses both the True Wireless Stereo (TWS) Bluetooth earbuds and their charging case. Given the spatial constraints of TWS earbuds and their portable nature, our protection solution is designed to be compact, featuring low capacitance, low leakage current, and high stability. For the power port, Leiditech utilize high-power, small-package ESD and EOS protection devices. For high-frequency signal lines, we use ESD protection devices with low junction capacitance. All ESD protection devices feature IR (leakage current) less than 0.1uA. Consequently, this solution is highly suitable for TWS Bluetooth earbuds and other wearable products.
This solution ensures signal integrity while passing ESD tests, meeting the following standards:
IEC 61000-4-2, with contact discharge up to 30kV and air discharge up to 30kV, ISO 10605-2 Level 4.
